

Course	Pre-requisite	Description
Accounting 10 	None	Accounting 10 is an introductory course introducing students to the fundamental principles of accounting. These include balance sheets, income, statements, worksheets, financial journaling and general ledgers. Students will learn the complete accounting cycle for a service business. In addition, students will explore the basics of real world financial situations and terminology ranging from personal banking, credit cards, loans and investments.
Accounting 20 	Accounting 10	Accounting 20 explores the topics of budgeting, finding a place to live and real-world money management ranging from intermediate knowledge of credit cards and loans, as well as investments. Topics learned in Accounting 10 will be revisited and applied in the program Quickbooks, a computer-based accounting program. Students will develop a business plan, set up their own business and will perform all of the accounting practices in a technological environment.
Accounting 30 	Accounting 20	Accounting 30 explores the topics of personal money management, as well as helping others with financial decisions. Projects include budgeting; travelling plans, costs and responsibilities; analyzing situations for others to find a place to live based on their financial situation; and advanced credit cards, loans and investments. Topics in Accounting 20 will be revisited and applied in the program Quickbooks, as well as learning more advanced options in this computer-based accounting program. Students will develop a business plan, set up their own business and perform all of the accounting practices in a technological environment.
Biology 30	Health Science 20 or Environmental Science 20	This course examines the details of living organisms and involves examination of organisms at various levels from molecular (biochemistry) through cells, tissues and concluding with organ systems. The study of inheritance rounds out the course. Human systems are studied including a hands-on dissection, with reference to simpler vertebrates and evolution.
Calculus 30	Pre-Calculus 30	Topics of study include: Function transformations, domains and ranges, limits and continuity, differentiation, graphical applications of derivatives, rates of change, optimization problems, related rates, differentiation of transcendental functions and applications.
Calculus 30 AP	Calculus 30	Topics of study include: All the topics of Calculus 30 with an emphasis of looking at all topics from a numerical, graphical, algebraic and analytical dimension. Other topics are Reimann sums, integration, area and volume of definite integrals, differential equations. This is a university class and the students will write a standardized University exam in the first week of May. If successful, the student will receive a 3 credit/unit class in differential calculus that is recognized in universities in the world and can be used toward an post-secondary degree.
Career and Work Exploration 10 	None	This course can be taken for 1 credit. The program is designed to help students learn appropriate job skills such as interpersonal communications and time management. It is a practical course relating school-based learning to the job situation. The course consists of two major components: individualized, self-directed learning activities and 50 hours at a work placement.

<p>Career and Work Exploration 20</p> 	None	<p>Work Education 20 is a combination of individualized self-directed learning activities and on-site job experience. The concepts of work, self-awareness, career exploration, job search techniques and job success skills are studied. Students select different job sites for practical work experience and application of learning activities. Students do not receive any remuneration for their work experience. The course consists of two major components for 1 credit: individualized, self-directed learning activities and 60 hours at a work placement. The student is required to provide his/her own transportation to work sites. Note that these credits may not be used for university entrance.</p>
<p>Career and Work Exploration A 30/B30</p> 	None	<p>The Work Education 30 program consists of two components. The individualized learning activities component includes the study of such topics as personal awareness, career planning and exploration, job search and preparation, employer-employee relations, labor standards, business structures, and financial management. The on-site work experience component consists of different employment opportunities for which the student does not receive remuneration. The course consists of two major components for 1 credit: individualized, self-directed learning activities and 75 hours at a work placement. The student is required to provide his/her own transportation to work sites. Note that these credits may not be used for university entrance.</p>
<p>Chemistry 30</p>	Physical Science 20	<p>Chemistry 30 involves an exploration of chemical structure and properties including organic compounds, with the main theme of the course being chemical equilibria; solutions and solubility equilibria, acid-base equilibria, and finally oxidation-reduction (electrochemistry). Mathematical problem solving skills are necessary for success in this course. An independent exploration project is a component of this course.</p>
<p>Christian Ethics 10</p> 	None	<p>Christian Ethics 10 has as its core theme Jesus Christ as revealed in the New Testament: His person, His works, and His actions. A study of his life and times helps students to understand the Christian perspective of the person and the divinity of Jesus Christ.</p>
<p>Christian Ethics 20</p> 	None	<p>The Christian Ethics 20 course is not intended to provide a total, comprehensive understanding of the Christian message. Its role is to help students articulate, reflect upon, and understand some common foundations of Christian beliefs and practice. The emphasis of this particular course will be on the rationale (reasons) for Christian belief.</p>
<p>Christian Ethics 30</p> 	None	<p>A goal of the Christian Ethics 30 course is to help students increase their understanding of the history of Christianity. Events preceding Jesus Christ to present day are explored in the context of how they shaped the Christian faith. Special attention is given to present-day issues that challenge Christians.</p>

<p>Commercial Cooking 20</p> 	<p>Recommended: Students should have their Food Safe Level 1 or be prepared to challenge the certification. This certification is offered in PAA 10 at WHS.</p>	<p>The Commercial Cooking courses are designed to create an awareness of and to develop entry level food preparation skills for the food industry. The food service industry is one of the largest employers in Canada. The study of food and cooking methods is essential to the cooking trade; therefore, lessons for students in cooking theory reinforce practical exercises. Students are also introduced to standards of professionalism that include elements of personal hygiene and the qualities of good workers. This class will not be taught in a sequential way. We will be catering breakfasts, lunches, and meetings to both meet an enhance our practical skills. The revenue generated from catering will be used to enhance learning opportunities (extra labs, upgraded equipment and field trip(s)).</p>
<p>Communications Media 10</p> 	<p>None</p>	<p>Students in this class will produce many short (60 second or less) videos and gain basic knowledge in the following areas: 1. The use of camcorders to take good video 2.The use of a variety of external mics to get better audio on the camcorder 3.The use of a variety of lighting techniques to improve video quality 4.How to capture and edit video on the computer 5.How to export video to a variety of formats. (DVD, Tape, and various internet video formats) 6. How to do basic video special effects.</p>
<p>Communications Media 20</p> 	<p>Recommended: Communciations Media 10</p>	<p>Students in this class will produce several videos (2 to 5 minutes) individually and in groups and gain advanced knowledge in the following areas: - The advanced use of camcorder jibs, cranes, and camera dollies. --- The use a variety of lighting techniques to add effects to video. --- How to plan and produce video as part of a team.-- Advanced editing and DVD production techniques. --- How to do advanced video special effects with green screens,</p>
<p>Communications Media 30</p> 	<p>Recommended: Communciations Media 10 & 20</p>	<p>In this class students will spend the entire class using what they have learned in CPT 10 and CPT 20 to develop their skill at producing longer productions (5 to 20 minutes.) Students who are interested and motivated may choose to spend up to half of this class pursuing areas of interest in Video Specials Effect, Audio and Music Production, or Animation.</p>
<p>Computer Science 20</p>	<p>It is STRONGLY RECOMMENDED that the student has an 80% or better average in Math before taking this course.</p>	<p>This course will introduce students to programming using the Python computer language. We will study the basics of programming and writing algorithms. Throughout the course we will cover data types, decision making structures, looping, conditional statements, functions (built in and student created) and arrays. Students will have a good foundation in programming when they complete this course. The last project of the course will be making a computer game using the concepts we have covered throughout the course.</p>
<p>Computer Science 30</p>	<p>Computer Science 20</p>	<p>We will be extending our knowledge of programming using Processing and Java. This course is much more visual in that we are incorporating graphics into all of our programs. We will cover many of the same structures that we used in Python but now using a new computer language. The structures we will look at are: data types, decision making structures, looping, conditional statements, functions and arrays, but now we will extend our knowledge to two dimensional arrays, and input/output files. Students will create as their final project a computer game using Processing and Java.</p>

Drafting and CAD 10	None	This course is an introduction to Computer-Aided Drafting using the computer program AutoCad.. It will include using CAD basics in simple drawings, multi-view drawings, pictorial drawings, basic dimensioning, sectional views, basic floor plans (2-D), furniture design and career opportunities. The final project will be designing a dream house.
Drafting and CAD 20	Drafting and CAD 10	This course builds on the skills learned in CADD 10 with more advanced drawings, using AutoCad. New topics include auxiliary views, 3-D drawings, and advanced dimensioning. In architectural, students will draw advanced floor plans, learn how to frame walls, exterior wall finishes, draw basic wall elevations (with windows and doors) and 3-D furniture, if time. In addition, secondary education and career opportunities are explored. The final project will be a 3-D dream house.
Drafting and CAD 30	Drafting and CAD 20	Students will advance their skills through more complex 2-D and 3-D drawings in AutoCad. Students will add more details on architectural floor plans. They will also explore and design electrical plans as well as, stairwells. If the opportunity arises, students may have an opportunity to complete a real-world project. Secondary education and career opportunities will be researched. The final project will be student-choice driven.
Drama 10	None	This course is an opportunity for students to explore the various aspects of drama: movement, speech, co-operation, characterization and the technical aspects of theatre production. Participants gain communication, organizational skills, confidence and concentration. Students who are shy about performing will build confidence but will also have the opportunity to learn technical skills for behind-the-scenes work. Plus it's fun! Students are expected to participate in in-class activities but there is no expectation that they will participate in the musical or competitive drama productions.
Drama 20	None	This is an extension of the Drama 10 course, but students don't have to have taken Drama 10 to be successful. Students continue to develop their skills through improvisation, scene work, and technical dramatic study. Students will become more involved in stage and technical management roles and are encouraged to take more of a leadership role in the class. Students who are shy about performing will build confidence but will also have the opportunity to learn technical skills for behind-the-scenes work. Students are expected to participate in in-class activities but there is no expectation that they will participate in the musical or competitive drama productions.
Drama 30	None	This is an extension of the Drama 10 & 20 courses, but students don't have to have taken them to be successful. Students will continue to use improvisation, scene work, and dramatic study to advance their skills, and are encouraged to experiment with student directing and stage management. Students who are shy about performing will build confidence but will also have the opportunity to learn technical skills for behind-the-scenes work. Students are expected to participate in in-class activities but there is no expectation that they will participate in the musical or competitive drama productions.
ELA A 10	ELA 9	The ELA A10 themes are: "The Mysteries of Life" and "The Challenges of Life". The course involves study of novels, non-fiction, drama, short stories, and film. Students will have numerous opportunities to develop language and literacy skills in reading, writing, speaking, and listening.
ELA B10	ELA 9	The ELA B10 themes are "Equity and Ethics" and "The World Around and Within Us". The course involves study of novels, non-fiction, drama, short stories, and film. Students will have numerous opportunities to develop language and literacy skills in reading, writing, speaking, and listening.

ELA 20	ELA A10 & ELA B10	The ELA 20 course is organized around the themes of “Starting Out – Beginning and Becoming” and “Moving Forward – Establishing and Realizing”. The course involves study of novels, non-fiction, drama, short stories, and film. Students will have numerous opportunities to develop language and literacy skills in reading, writing, speaking, and listening.
ELA A 30	ELA 20	The A30 course is organized around themes that focus on Canadian literature and society including “Canadian Perspectives: Distinct and Rich” and “Canadian Landscapes: Diverse and Dynamic”. Assignments and activities are designed to continue development of skills in listening, speaking, representing, reading and writing. Of particular importance is the student and composition of the literary essay.
ELA B 30	ELA 20	The B30 course is an issues-oriented course organized around human concerns in a global society. Students study both traditional and contemporary world literature in a comparative manner to explore themes from global perspective. “The Human Condition-In Search of Self” and the “The Social Experience-Beyond Personal Goals” are examples of issues studied in this course.
Environmental Science 20	Science 10	Students will learn how to examine local and global environmental issues from a systems perspective while considering the effects of human actions and a growing global population on the climate and environment, as well as the effects of the environment on human health. They will explore the mechanisms and importance of aquatic and terrestrial ecosystems and the sustainability of past and current practices and technologies humans have developed to live with and within the environment.
Exercise Science 30 	None	Exercise Science focuses on the study of human movement and of systems, factors and principals involved in human development. Students will learn about the effect of physical activity on health and performance, the evolution of physical activity and sports, and the factors that influence an individual's participation in physical activity. The course prepares students for university programs in physical education, kinesiology, recreation, sports administration, or any health profession.
Financial Literacy 30 	None	The many aspects of money will be discussed at an intermediate and advanced level in areas including: personal finances, financial advice, personal income tax, funding post-secondary school, saving, investing, and debt management. This course will be very practical and allow students to investigate all aspects of money.
Food Studies 30	Recommended: Practical & Applied Arts Survey A10 (Home Ec 10) or Permission	This course combines academics with practical food experiences. There will be a minimum of 15 cooking experiences plus assignments, notes, tests and projects. Topics covered include the study of nutrition; fruit, vegetable and salad preparation; milk, egg and cheese cookery; poultry, beef and pork; principles of baking.
Foundations of Math and Pre-Calculus 10	Math 9	Topics in the class are factoring, irrational numbers, units of measurement (SI and imperial), trigonometric ratios, polynomial expressions, relations and functions, slope, linear relations, equations of linear relations, and problem solving.

Foundations of Math 20	Foundations of Math & Pre-Calculus 10	This class is designed to provide students with the mathematical understanding and critical thinking skills identified for post-secondary studies in programs that do not require the study of theoretical calculus. Topics include financial mathematics, geometry, measurement, number, logical reasoning, relations and functions, statistics and probability. For math students that excel at math this class is recommended to improve mathematical understanding and develop stronger math skills before taking Pre-Calculus 20.
Foundations of Math 30	Foundations of Math 20	In this class, students will be able to demonstrate an understanding of financial decision making, inductive and deductive reasoning, set theory and its applications, extend understanding of odds and probability and probability of two events, combinatorics and representation and analysis of data and data collection.
French 10 	Recommended: French 9	The curriculum promotes the teaching of language through themes that focus on student experiences. Each field of experience includes a topic to be developed and an experiential goal. This goal creates a need to know certain language structures and vocabulary which are formally taught. The themes include consumerism, le permis de conduire (driver's license) and les voyages (travel).
French 20 	French 10	This course provides students with knowledge about the structure and functioning of the language and develops the ability to communicate. A systematic approach is used to develop the four language skills -- speaking, reading, listening and writing. The themes include lifestyles, arts and franco-jeu (games).
French 30 	French 20	This course is designed to develop vocabulary relevant for daily communication to acquire a knowledge of French idioms, to revise previously learned verb tenses, and to further develop reading and speaking skills. The themes include media, cultures of the world and world issues.
Health Science 20	Science 10	This course will challenge students to look at the health science field from holistic and analytic perspectives to provide a basis for making sound personal health choices. Students will examine the range of philosophies that guide health care and consider ethical decision within those contexts. Understanding the basic anatomy and physiology of the human body will provide a context for studying the normal and abnormal functioning of various body systems, including the role of nutrition and metabolism. Lastly, students will examine diagnostic tools and procedures and how they are used to inform treatment. Students will also investigate the range of health science careers and post-secondary programs available in Saskatchewan.
History 10	Social Studies 9	This is a continuation of the study of the foundations of western civilization. The course includes political decision-making, economic decision-making, ideology and the decision-making process, international economic relations and international political relations from 15th through 19th century Europe.
History 20	Recommended: Grade 10 Level Social Science	History 20 is a comprehensive history of the 20th century, from WWI to 9/11. This course will focus on a number of themes such as nationalism, totalitarianism, imperialism, militarism, and terrorism. It will also attempt to outline and explain how the important events of our recent past have shaped the world that we live in today.
History 30: Canadian Studies	Recommended: 20 Level Social Science	Canadian studies including geography, native culture and contributions, French-English relations, Canadian-American relations, multiculturalism, Canadian political and economic history, and the function of our government.

Information Processing 10	None	This course will focus on using computers for personal use. The students will learn how to write resumes, letters, reports and other personal documents. They will also learn to use a spreadsheet for various applications and how to generate many types of charts. A basic introduction to digital photography will be included and students will learn how to do simple digital editing and photo correction as well as a how to create some simple special effects. Finally, students will learn how to use PowerPoint to put together a slide show presentation. Scanners and digital cameras will be used at various points throughout the course. Students are not required to have their own digital camera but may if they wish to. Students should supply their own cheap set of earbuds or headphones for this course.
Information Processing 20	None	This course will expand on what was covered in Information Processing 10 and will focus on the use of computers and applications in business. Manuscripts will be reviewed including a complete table of contents, headings, endnotes/footnotes and a bibliography page. Spreadsheets, charting and databases will be covered. Desktop publishing will be introduced and students will create a simple newsletter. Students will also design an advanced power point presentation and use Photoshop to create posters for an event
Information Processing 30	None	This course is composed mostly of large projects and some group work. The focus is on the use of computers and applications for project and office management. Students will produce a variety of more advanced publications like pamphlets, brochures, newsletters, newspapers or children's books using desktop publishing. Students may choose to dedicate a portion of their semester to exploring various applications of person interest in areas like web page development, animation, areas of graphic arts, advanced office applications, multimedia creations, etc
Law 30	None	This course is designed to assist students in becoming active, informed, and productive citizens who know and understand their legal rights and responsibilities. We will explore the foundations of Canada's legal system, criminal law, civil law, family law and labor law.
Leadership 20	None	The Leadership 20 course is designed to develop students' knowledge and skills about leadership. Areas to be developed: servant leadership, goal setting, problem-solving, communication skills, and community participation. With all those areas in mind, the students in this course will take on a direct leadership role by partnering with our Best Buddies program at WHS. Best Buddies creates opportunities for one-to-one friendship and leadership development for people with intellectual and developmental disabilities. Students in the Leadership 20/30 course will work side by side with students in the Best Buddies program by offering social mentoring and improving the quality of life and level of inclusion at WHS.
Leadership 30	None	The Leadership 30 course is designed to develop students' knowledge and skills about leadership. Areas to be developed: servant leadership, goal setting, problem-solving, communication skills, and community participation. With all those areas in mind, the students in this course will take on a direct leadership role by partnering with our Best Buddies program at WHS. Best Buddies creates opportunities for one-to-one friendship and leadership development for people with intellectual and developmental disabilities. Students in the Leadership 20/30 course will work side by side with students in the Best Buddies program by offering social mentoring and improving the quality of life and level of inclusion at WHS.
Music 10	None	The Music 10/20/30 program is a series of courses designed for students who are interested in a broad spectrum of musical experiences. Students should be able to identify an instrument or area of music study that they will chose to pursue; voice, instrument, or multi-faceted exploration. There is an expectation to collaborate with other musicians in the program. There are three main assessment components: performance, theory & music language, elective choices (Careers in Music, Jazz Appreciation, Popular Music, History of Western Music, World Music)

Music 20 	None	The Music 10/20/30 program is a series of courses designed for students who are interested in a broad spectrum of musical experiences. Students should be able to identify an instrument or area of music study that they will chose to pursue; voice, instrument, or multi-faceted exploration. There is an expectation to collaborate with other musicians in the program. There are three main assessment components: performance, theory & music language, elective choices (Careers in Music, Jazz Appreciation, Popular Music, History of Western Music, World Music)
Music 30 	None	The Music 10/20/30 program is a series of courses designed for students who are interested in a broad spectrum of musical experiences. Students should be able to identify an instrument or area of music study that they will chose to pursue; voice, instrument, or multi-faceted exploration. There is an expectation to collaborate with other musicians in the program. There are three main assessment components: performance, theory & music language, elective choices (Careers in Music, Jazz Appreciation, Popular Music, History of Western Music, World Music)
Native Studies 10	None	The aim of Native Studies 10 is to help all students develop their knowledge, positive attitudes and cultural understanding about First Nations, Métis and Inuit peoples. The unique history of Aboriginal peoples is part of our collective past and present reality. Thus, students will benefit from a study of Aboriginal peoples because it will give them the opportunity to understand and respect one another.
Native Studies 20	None	Native Studies 20 is an examination of contemporary issues of concern to Indigenous peoples around the world. Case studies are used to support and expand upon the basic concepts, legislation, and Indigenous perspectives presented in the Student Resource Guide. It is hoped that students will: gain an understanding of the historical bases of current issues of concern to Indigenous peoples; become aware of and increase their understanding of philosophies which are the foundations of Indigenous cultures; develop a personal sense of social commitment through the creation and implementation of action plans for social change.
Native Studies 30: Canadian Studies	None	The aim of Native Studies is to develop personal awareness and cultural understanding, and to promote the development of positive attitudes in all students towards Indigenous peoples. This is a course that examines contemporary Canadian Aboriginal issues. The curriculum is broken into five units: Aboriginal and Treaty rights, governance, land claims and land entitlement, as well as economic development, and social development
Outdoor Ed 20	Science 10, ELA A10 & ELA B10	Outdoor Ed a combination of Environmental Science 20, ELA 20, Native Studies 30, and Phys Ed 20. It occurs in an outdoor classroom environment. Admission into this course is by application only.
PAA Survey A10 	None	This course surveys a number of topics of interest. It includes meal planning; International Foods; a Sanitation Training Course for Food Handlers called "Food Safe"; plus a sewing project.
PAA Survey B10	None	This is a survey course and includes: 1) Welding – an introduction to safety, equipment and basic welding techniques; 2) Carpentry and Construction – safety, wood theory and the use of stationary and portable power tools; 3)Career and Work Exploration – labor standards and recognizing hazards.
PAA Survey B20	Recommended: Practical & Applied Arts Survey B10 (Industrial Arts 10) or	This survey includes: 1) Welding – safety, oxy-acetylene cutting and welding, MIG equipment and welding, arc welding practice and career opportunities. 2) Carpentry and Construction – safety, advanced use of power tools and an introduction to building construction. 3) Career and Work Exploration – Workplace Hazardous Materials Information System.

PAA Survey B30	Recommended: Practical & Applied Arts Survey B20	This survey course includes: 1) Welding – safety, advanced arc and MIG welding procedures and practice 2) Carpentry and Construction – safety, wood theory and cabinetry 3) Career and Work Exploration – occupational health and safety
Personal Fitness 20	None	Students in this course will improve upon their balance, coordination, speed, flexibility, strength, agility and power. We focus on the latest training principles while applying them to our workouts during regular class time. The training principles that we apply are: functional movements, core strength, resistance training, stretching and plyometrics.
Personal Fitness 30	None	This course emphasizes regular participation in a variety of enjoyable physical activities that promote lifelong healthy active living. Student learning will include the application of movement principles to refine skills, participation in a variety of activities that enhance personal competence, fitness, and health, examination of issues related to healthy sexuality, healthy eating, substance use and abuse, and the use of informed decision-making, conflict resolution, and social skills in making personal choices. Improved physical fitness through aerobic and weight training is the main objective of this course. Success is dependent upon the students being strongly motivated to improve their personal fitness.
Photography 10 	None	This course focuses on the following areas: The use of digital cameras and understanding and using the controls on them; Develops basic photographic skill and a knowledge of good photo composition; Knowledge of photographic terminology and the use of light, light kits and the flash; Image adjustment, picture correction, problem correction and image manipulation; An introduction to creating effects in digital photography.
Photography 20 	Recommended: Photography 10	This course goes into more depth in the aspects covered in the Photography 10 course as well as covering:the critiquing, presentation and sharing of images; Photojournalism; Advertising and product photography; Intermediate photo correction and manipulation. It includes several photographic projects giving the student freedom to do some projects in areas of special interest to the individual student.
Photography 30 	Recommended: Photography 10	This course goes into great depth in the main aspects covered in the Photography 10 course as well as covering: Portraiture ; Advanced photo correction and manipulation; Entrepreneurship; Students may choose from a variety of person interest areas and are able to spend a good portion of class time developing skills in their special areas of interest.
Phys Ed 20	None	Physical Education 20 is an extension of the Wellness 10 program in that it is directed at lifetime recreation and developing an active lifestyle which will promote lifelong fitness and health. The course has five themes: Developmental Games and Sports, Educational Games and Sports, Educational Gymnastics, Fitness and lifetime games and sport.
Phys Ed 30	None	The course is an extension of the PED 20 program and follows the same five themes. Students adopt a greater responsibility for their own health and fitness choices as well as their involvement in promoting lifetime fitness in the community through individual and group projects.
Physical Science 20	Science 10 (Also recommended: Foundations of Math 20)	Physical Science 20 combines chemistry and physics in an introductory course that serves as the prerequisite for Chemistry 30 and Physics 30. Physical Science 20 involves an exploration into topics in both chemistry and physics. Topics of study include waves, light (and other electromagnetic radiation), sound, chemical reactions, stoichiometry, and heat. Career investigation and independent exploration are also a component of this course.

Physics 30	Physical Science 20	The Physics 30 course explores the following topics: vectors, uniform motion, accelerated motion, forces and Newton's laws, circular and projectile motion, kinetic and potential energy, momentum and impulse, electromagnetic and gravitational fields, wave particle duality, relativity, and nuclear physics. An independent exploration project is a component of this course. Strong mathematical problem solving skills are necessary for success in this course.
Pre-Calculus 20	Foundations of Math & Pre-Calculus 10	This pathway is designed to provide students with the mathematical understandings and critical-thinking skills identified for entry into post-secondary programs that require the study of theoretical calculus.
Pre-Calculus 30	Pre-Calculus 20	This pathway is designed for students that are planning to take Calculus 30 and/or Advanced Calculus AB. This class is a rigorous math class with focus on relations, functions, graphing, solving and number theory. These critical-thinking skills are required for entry into post-secondary programs that require advanced math/sciences classes.
Psychology 20	None	This course deals with developing an understanding of individual behaviors through psychological methods and theory. The major areas of study are personality, intelligence, and principles of learning.
Psychology 30	None	The Psychology 30 course studies the human life span from pre-natal development through infancy, childhood, adolescence, early and mid-adulthood and old age. It discusses the unique characteristics of individuals at these different stages. Students learn about the development tasks that one must confront in order to grow successfully at each stage. Psychology 30 also branches out into other areas of psychology and research (e.g., ways of coping with stress).
Robotics 10 	None	Robotics 10 is an introduction to the world of robotics. It is a great hands-on experience for students to build, create, and code using Arduino. It covers everything from knowing how to use the tools needed to work with electronics to soldering to coding with a partner. The coding is at the introductory level, so no previous knowledge is required. Most assignments are project based and interactive. If you like working with your hands, collaborating with others, and learning cutting-edge technology, this is the class for you!
Robotics 20 	Robotics 10	Robotics 20 is an intermediate class in robotics. Students go beyond what was learned in Robotics 10 to create their own Arduino code and design their own projects. Soldering with Printed Circuit Board (PCB) allows for design of more complex projects. A more in-depth discovery of the operation of computers is achieved via a game environment. Students also have opportunity to create simple designs to be printed on the WHS 3D printer and incorporated into their projects. Students in this course will build a vehicle to be controlled through a course with code as a final project.
Robotics 30 	Robotics 20	Robotics 30 will do more advanced Arduino microprocessor programming and build more complex electronic machines to perform a variety of tasks. They have choices about aspects of the new Saskatchewan Robotics curriculum that they would like to explore (drones, robotic arms, radio-controlled vehicles, combat vehicles, wearable devices, etc). A unit on Design gives students the opportunity to create and print their own robot bodies on the WHS 3D printer. Students will modify and build a variety of robots and may choose to enter and compete in the Saskatoon Combat Robotics Club (SCRC) tournament called Kilobots, with teacher approval.

Science 10	Science 9	The Science 10 course has three key units: Climate and Ecosystem Dynamics (this unit examines the evidence and consequences of global climate change, local and global weather patterns, ecosystem interactions, population factors, and nutrient cycles.) Force and Motion in Our World (this unit explores motion related technologies, observe and describe the motion of everyday objects, investigate the relationship among displacement, time, and velocity, and acceleration for objects that undergo simple linear motion and accelerated motion, effect of forces in one and two dimentions). Chemical Reactions (Explores: rates of chemical reactions, writing chemical formulas and equations, types of chemical reactions). Career Investigation: To investigate career paths related to science.
Social Justice Literacy 10 	None	Social justice is the view that everyone deserves equal economic, political, and social rights and opportunities. In this course students will explore the concept of social justice and the causes and consequences of oppression and injustice in Canada and the world. Through a variety of literature and film, students will discuss sexism, racism, poverty, the environment, LGBTQ2S+ issues, ableism, and mental health, and look at how these issues - both in historical and contemporary contexts - affect our world today. To register in this class, choose "Social Studies 10" under the Social Sciences credit. **Success in this class will result in the student attaining both an ELA A10 credit and a Social Studies 10 credit.
Visual Art 10 	None	This course introduces the student to materials, techniques and art history for creative design, drawing, painting, sculpture and collage
Visual Art 20 	Recommended: Visual Art 10	In Visual Art 20, more advanced techniques in drawing, painting, collage, sculpture and design are explored. The study of art history centers on contemporary art styles.
Visual Art 30 	Recommended: Visual Art 20	In Visual Art 30, advanced techniques in drawing, painting, collage, sculpture and design are explored. The study of art history centers on visual arts in Canada.
Welding 10 	None	Students will work in three major areas: oxy-acetylene welding, electric arc welding, and M.I.G. (Metallic Inert Gas). Students will learn safety and the proper use of equipment prior to the commencement of welding. They will perform arc welds, oxy-acetylene welds, and M.I.G. welds. Upon the completion of the compulsory sections, they will spend their remaining time working on student-oriented or teacher-directed projects. Upon successful completion of this course students will e able to apply 100 hours toward apprenticeship in the welding trade
Welding 20 	Welding 10	Safety, welding terminology, and oxy-acetylene cutting in addition to an increased competency in the use of electric arc, M.I.G. (Metallic Inert Gas), and T.I.G. (Tungsten Inert Gas) will be the emphasis. Upon completion of the compulsory sections, students will spend their remaining time designing and fabricating a project of their choosing or teacher-directed projects. Students will pay for their own projects. Upon successful completion of this course students will be able to apply 100 hours toward apprenticeship in the welding trade.

Welding A 30 	Welding 20	Safety, welding terminology, and oxyacetylene cutting in addition to an increased competency in the use of electric arc, M.I.G. (Metallic Inert Gas), and T.I.G. (Tungsten Inert Gas) will be the emphasis. Upon completion of the compulsory sections, students will spend their remaining time designing and fabricating a project of their choosing or teacher-directed projects. Students will pay for their own projects. Upon successful completion of this course students will be able to apply 100 hours toward apprenticeship in the welding trade.
Wellness 10	None	This program provides an integrated approach to the issues of lifetime recreational activity and health. An emphasis will be placed on supplementing regular activities with lifetime/outdoor recreational opportunities not traditionally covered by high school athletics. There are two different approaches to Wellness 10 - for the more competitive version choose "Wellness 10" when you register, for the less competitive version choose "Personal Fitness 20L" when you register.
Workplace & Apprenticeship Math 10	Mathematics 9	This pathway is designed to provide students with the mathematical understandings and critical-thinking skills identified for entry into the majority of trades and for direct entry into the work force. Topics include algebra, geometry, measurement, number, statistics and probability.
Workplace & Apprenticeship Math 20	Workplace & Apprenticeship Math 10	This pathway is designed to provide students with the mathematical understanding and critical-thinking skills identified for entry into the major of trades and for direct entry into the work force.
Workplace & Apprenticeship Math 30	Workplace & Apprenticeship Math 20	This pathway is designed to provide students with the mathematical understanding and critical-thinking skills identified for entry into the major of trades and for direct entry into the work force.
